MATERIALS & FINISHES

The Surface.

The complete library
Berco · 2026 Edition

A finish is not a colour. It is how a surface behaves.

This is the complete library – 202 finishes, grouped by the material each one is actually made from, because that is what decides how it wears, where it belongs, and what it costs to put right if it is specified into the wrong room. Colours here are a guide. The physical sample is the decision.

09	Choosing, and what to expect	24

Three layers, one decision.

Nearly every door in this book is the same three things: a core, a face, and an edge. The face is what you see and what this book shows. The core decides how the door carries weight and handles moisture. The edge is where cheap cabinetry gives itself away first.

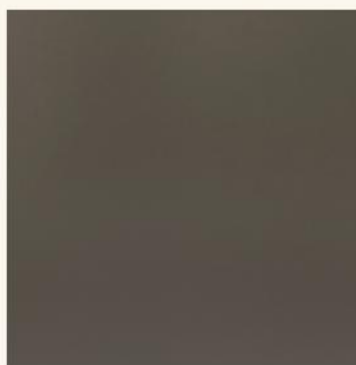

The core

11-layer plywood. Carries the load, holds the screw, and decides how the door copes with a wet room.

The face

Melamine, film, lacquer, UV, veneer, leather. What you see, touch and clean – and what this book is about.

The edge

Banded, wrapped or laser-bonded. The first thing to lift on a poor door, and the last on a good one.

PART ONE

The Selection.

54 finishes we would put in front of you first — the range edited down to what actually works together. Everything we hold follows in Part Two.

FAMILY 01

Double-Faced Melamine

A hard-wearing decorative surface pressed onto board. The everyday workhorse — scratch-resistant, colour-stable, and the broadest palette we carry.

Specialist Surfaces & Carcase

POWDER-COAT · PET · VENEER · LEATHER · 11-LAYER PLYWOOD CARCASE

Surfaces for where a scheme needs something the main families cannot give it – a seamless coated edge, a true wood face, a tactile panel – plus the cabinet box itself, which is specified separately from the door.

Choosing.

See it in your own light

Every screen and every printed page shifts colour. Before anything is ordered we put the physical sample in your room, against your floor and your worktop, and look at it in daylight and at night. The sample is the decision, not this book.

Match the surface to the room

A wet room, a south-facing wall and a low-traffic dressing room are three different problems. We will tell you where a finish is the wrong choice, including when that means talking you out of the one you arrived wanting.

Availability changes

Ranges are added to and retired by the mill. We confirm that a finish is current and orderable at the point of quoting, and we will say so plainly if something you have chosen has been discontinued.

Would you like us to review your space
and guide you through the finishes?

Where each family belongs.

Counted from the approvals on every finish in this book — how many in each family the mill clears for each room. A low count is not a warning, but it is worth asking about before a finish goes somewhere wet.

Figures are counts of finishes, not a durability rating.

Living with it.

Every day

A soft cloth and warm water. Wipe spills when they happen rather than later — most staining is a timing problem, not a material problem.

Never

Abrasive creams, scouring pads, bleach, or anything solvent-based. They dull a matt finish and micro-scratch a gloss one, and neither comes back.

Heat

Use a trivet. Quartz is heat-resistant to roughly 300°F, but a pan straight off the flame can still mark it. Sintered stone takes more, but the habit is the same.

Water

Wipe standing water from joints and around the sink. The board behind any finish is the part that minds, and the edge is where it gets in.

Sunlight

Strong direct sun will move most colours over years. It is worth knowing before you put a dark lacquer on a south-facing run.

If something goes wrong

Tell us early. A lifted edge or a swollen corner caught in the first week is a repair; caught in the first year it is usually a replacement.
